The Milk Moover®

Benefits & Features

The Milk Moover® is the industry standard for merchandising milk. Stationary or portable, this rack boasts tool-free-adjustable heavy duty wire shelves and dividers to help lower friction and provide maximum flow. The Milk Moover® is NSF listed and designed with sanitation in mind. This is the "Cream of the Crop" in dairy merchandisings

- One piece shelf construction for strength
- Snap-on, snap-off dividers for in-store, tool-free re-merchandising
- Front end stop prevents product from nesting, bulging or crushing, while displaying product clearly
- Built in backstop prevents product falling from the back of the shelf
- Drip tray collects spillage before it hits the cooler floor; easy to remove and clean
- Gravity flow feature provides automatic front-faced product and FIFO rotation

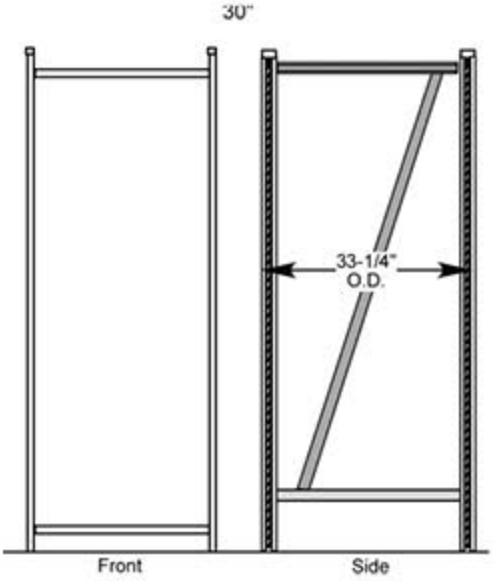
Uprights & Dollies

See pages 28-35 for measuring instructions

Stationary Upright

Upright orders consist of (2) Uprights and (2) Cross Braces.

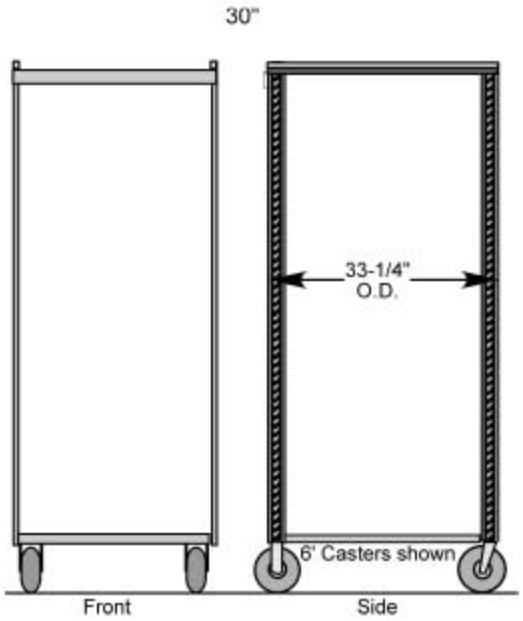
- 80" Tall
- 30", 26", 23" Wide
- Galvanized Steel Finish or E-Coat and Epoxy in white, gray or black



Portable Dolly (Specify 3", 4" or 6" caster)

Behind glass doors or in air-screen coolers - 3' or 4' deep shelves, 5 or 6 shelves

- 77" tall standard; other heights available based on cooler height
- 30", 26", 23" Wide
- Galvanized Steel Finish or E-Coat and Epoxy in white, gray or black
- VISTA/French Door dollies - 86.5" tall, 60.5" wide



Components

A basic Milk Moover consists of 1) a dolly or a set of uprights and cross braces, 2) shelves with dividers to face pints and quarts, half gallons and gallons, 3) front tag molding (PTM) and 4) a Plexi front end stop (PFES).

Shelves fasten to uprights/dolly with shelf clamps that engage keyholes on the uprights and hooks on the shelves. Tag molding can also be placed on the back of the shelf.
In addition, we recommend:

A. a drip tray, whether one that lays on the floor under the unit or one that sits on optional bumpers, on the front of the unit.
B. bumpers which fasten under a dolly front, with adjustable front projection, if your cooler has front lighting .
C. glide sheets which are shelf-sized pieces of ribbed plastic, set on any shelf for improved flow, and for additional drip management.

Shelf Clamp (SC-5)

Shelf Sizes & Types

Nyla-Track® II

Benefits & Features

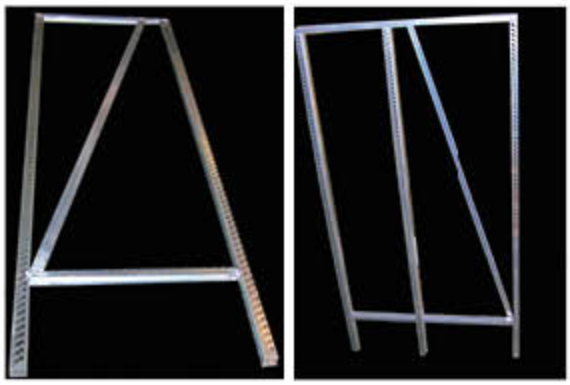
Designed to meet your most demanding requirements, Nyla-Track®II is a merchandising system for presenting packaged beer and single serve beverages to your customers. Fabricated from heavy gauge galvanized steel and extruded aluminum for strength and durability, this efficient design makes use of gravity glide technology for 6 packs and singles, and roller track for cartons, making quick work of getting your product "CLOSER to the Customer®".

- Wing nut and screw track attachment adjusts easily for in-store re-merchandising or packaging changes.
- EZ Ajust uprights allow secure shelf placement in addition to quick and easy in-store adjustments to shelf pitch and height without the use of tools.
- Diagonal supports and sway braces provide strength and rigidity to produce a heavy-duty stand-alone system.
- Shelf teeth allow each shelf to be positioned at different front projections for easy customer access to larger and heavier bottles and packages.

Intertek
Sanitation Listed, Conforms to NSF Standard 2

Questions? Call us: 800-323-2517

Uprights



Stationary Upright

E-Z Ajust® Uprights allow customers to adjust shelving height and pitch without tools and vary shelf depths within the cooler. An upright is the side of a unit-a joined front and back 2" leg-with keyholes on two surfaces, so that one upright can be used between two sets of shelves (common upright)
An upright with 3 legs (Combo Upright) is used to support two different shelf depths on adjoining units.
A 1-1/2" upright is used when B-O-F shelving is set up next to another manufacturer's shelving unit or to accommodate a double mullion.

- 85-1/2" or 91-1/2" tall
- Shelf depths 3' to 10'

Portable Dolly

Portable dollies also use E-Z Ajust® Uprights, mounted to a castered base.

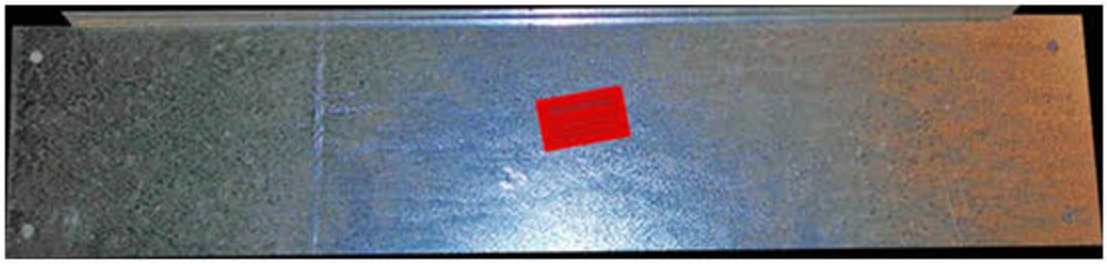
- 80" tall
- Shelf depths 3' to 4'
- Unit widths 23", 24", 26", 28-3/4", and 30"
  Also widths to fit Vista/French Doors
- 2 Swivel/2 Locking casters
- Dollies must be emptied to move

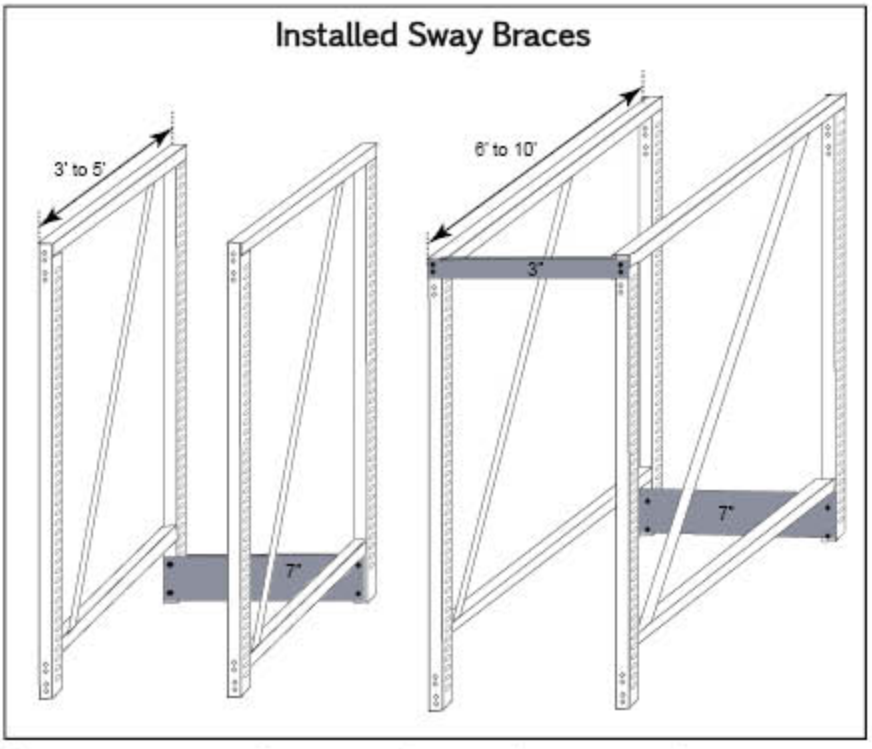
Sway Braces

Sway braces are installed to connect the series of stationary uprights. They can be installed on the back top or bottom, or the front top or bottom, or a combination of locations.

The primary sway brace is 7' tall; secondary braces are 3" tall, with the span specific to the unit width and the width of the uprights being joined, i.e., 2" to 2", 1-1/2" to 2", etc. There are both double and single sway braces.

Order one sway brace for each unit 3' to 5' in depth.
Order 2 sway braces for units 6' to 10' in depth





Improper installation of sway brace voids warranty.

Components

VersaRack™/VersaRoll™

Benefits & Features

Designed to provide "conveyor-like" product flow to all shelving, VersaRoll™ mats can be placed on any B-O-F shelf or competitors' flat shelves. A one-piece, continuous roller surface under every product, with rigid, drop-in dividers, enables multiple-sized facings on the same shelf to flow smoothly and independently. This is an ideal system for single serve beverages. Specially engineered yogurt dividers keep both wide top and wide base containers in line without chiming, on the same shelf. Yogurt, cottage cheese and sour cream, in all volumes, flow neatly and well.

- Tall uprights, 91.5", provide 7 shelf possibilities in your cooler
- Manufactured in 3' and 4' depths; shelf extension for 27" flat shelf available
- Single and double door

Intertek
Sanitation Listed, Conforms to NSF Standard 2

Questions? Call us: 800-323-2517

Components

A basic VersaRack™ consists of two 91.5" black uprights, two 3" sway braces, shelf frames, a one piece roller mat to cover the shelf area, side dividers or a shelf drip tray, dividers - either flat or Class II dairy (See Parts) and a front end stop in a price tag molding. Shelves are held in the uprights by shelf clamps.

The VersaRoll™ shelf components can also be placed on wire Milk Moover shelves, and on single and double wide shelves.

Stationary Uprights

Tall E-Z Ajust® Uprights allow customers to maximize the number of shelves behind their doors and adjust shelving height, pitch and projection without tools.
An upright is one side of a unit-a joined front and back 1.5" wide leg, with keyholes on two surfaces, so that one upright can be used between two sets of shelves (commom upright). Shelf clamps in the keyholes support the shelves between the uprights.

- 91-1/2" tall
- Shelf depths 3' & 4'
- Black E-Coat finish

Sway Braces

Two 3" Epoxy-coated sway braces connect the uprights. They are typically mounted top front and bottom rear. Both must be installed to keep warranty valid

Shelf Frame

Standard Epoxy-coated shelf frames are 36" or 48" deep. ***An extender kit is available to add depth to an existing 27" frame. (p. 25)***

Roller Mat

One piece plastic and metal frame holds narrow rows of roller track providing independent forward flow for a variety of product sizes on the same shelf. Standard 3' and 4' depths for 30" and 26" wide units. Black or Gray

Side Dividers

Side dividers keep product from falling off the sides of shelves. They are "L" shaped on single width and retro-fit shelves, and have a "step" profile for Vista door shelves, double shelves, and on yogurt shelves. Black or Galvanized

Shelf Drip Pan

Drip pan and side dividers all in one piece Black or Galvanized

Dividers

Blade-style dividers about 4" tall run the depth of the shelf and anchor front and back to provide support for beverages and vertical-sided product. Black or Galvanized
Channel-shaped aluminum dividers, about 3/4" tall, provide support for cultured product with angled sides..

Price Tag Molding

Price Tag Molding in gray or black is used on all shelves of packaged product and supports Plexi Front End Stop on shelves of single beverages. Wire shelf PTM is used with VersaRoll™ on wire shelves.

Plexi Front End Stop

Plexi Front End Stop comes in 2" or 4" heights, and also a notched version for wire shelves using VersaRoll™.

Notes

LEED® and Environmental Practices

Looking for LEED®?

B-O-F's Gravity flow shelving systems can qualify for LEED® points for locations within 500 miles of our Chicago manufacturing facility (LEED points Materials & Resources 5.1). Additionally, all B-O-F steel shelving is recyclable. Please contact B-O-F if you have shelving that is ready for the recycling process.

LEED® is a registered trademark of the U.S Green Building Council.

Environmentally-Friendly Practices

Plastic

B-O-F uses recycled plastic materials for the majority of the plastic parts we manufacture. Any plastic waste is collected and reground again for future use. Because it requires less energy to fashion plastic than steel, B-O-F recently began making drip trays from recycled plastics instead of galvanized steel. Using recycled rather than virgin plastic reduces our energy consumption by 80%. Plastic regrind is readily available and competitively priced, so our customers benefit environmentally and from the cost savings as well.

Coatings

B-O-F offers the option to electrocoat shelving components. Not only does e-coat prevent rust and help maintain a 20+ year service life, but it achieves a level of efficiency and environmental compliance unlike any other finishing method. The environmental advantages include no or low VOC and HAP emissions, heavy-metal-free products and minimum waste discharge. Ninety-five percent (95%) or more of the paint components (resin, pigment, and other additives) will be applied and cured on the product due to the recycling of paint through ultrafiltration.

Steel

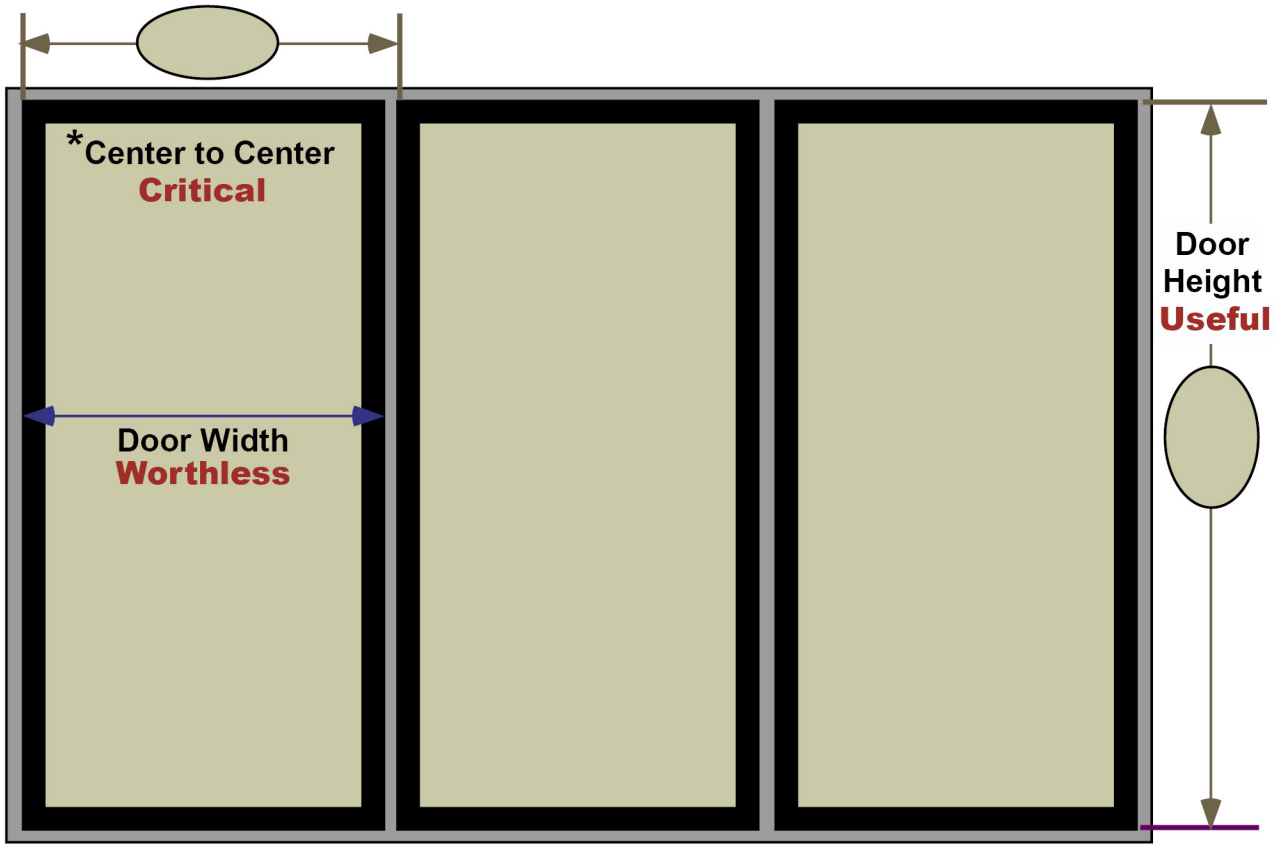
The steel used in B-O-F shelving is made from a steel manufacturing process that includes 60-75% recycled steel. The use of recycled steel conserves raw materials and energy. The re-melting of steel requires 74% less energy than the production of virgin steel from raw materials. Using recycled steel also lessens the burden on landfill and waste facilities as well as prevents the deposit of discarded steel products in the environment. Steel scrap is readily available and is competitively priced. B-O-F customers thereby benefit environmentall and monetarily.

Recycle

Under no circumstance should discarded B-O-F shelving end up in landfills. Please call 800.323.2517 to find out how your retired shelving can be efficiently recycled.

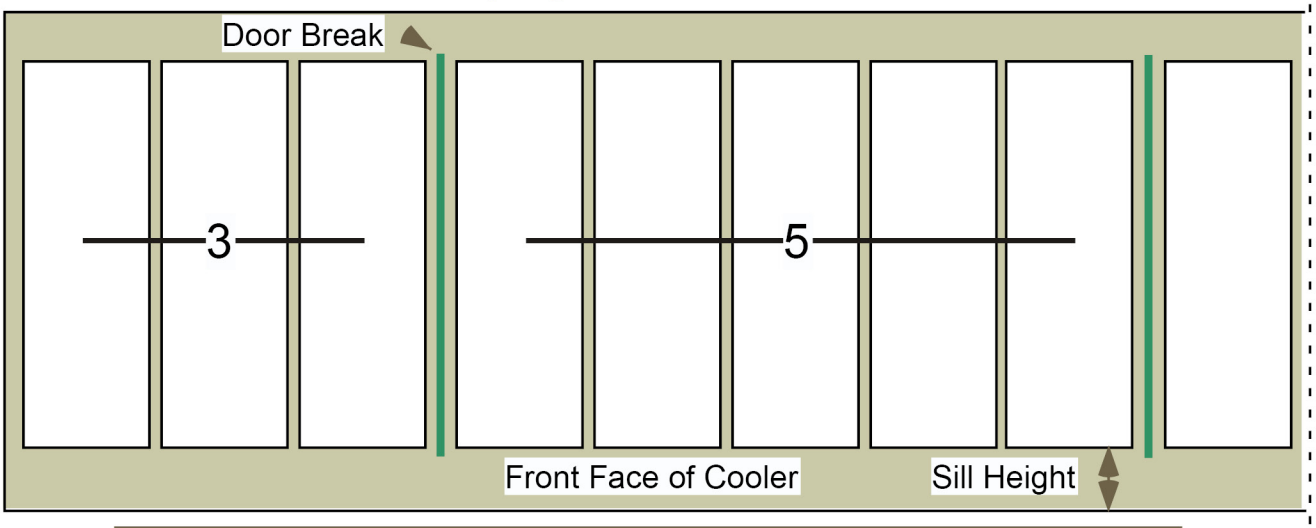
How to Measure

What Size Are Your Doors?



*Center to Center is measured as the distance from the upper left corner of the 1st door to the upper left corner of the 2nd door.
This measurement determines the width of your B-O-F shelving units

Glass Display Door "Sets & Frames"



Glass Display Door "Sets & Frames" typically come in "sets" of 2, 3, 4 or 5 doors.
Please look closely at your doors to see where the break is in the line-up.
The break in the door frames is also called a "double mullion."
The mullion location helps us center the shelving behind your doors.

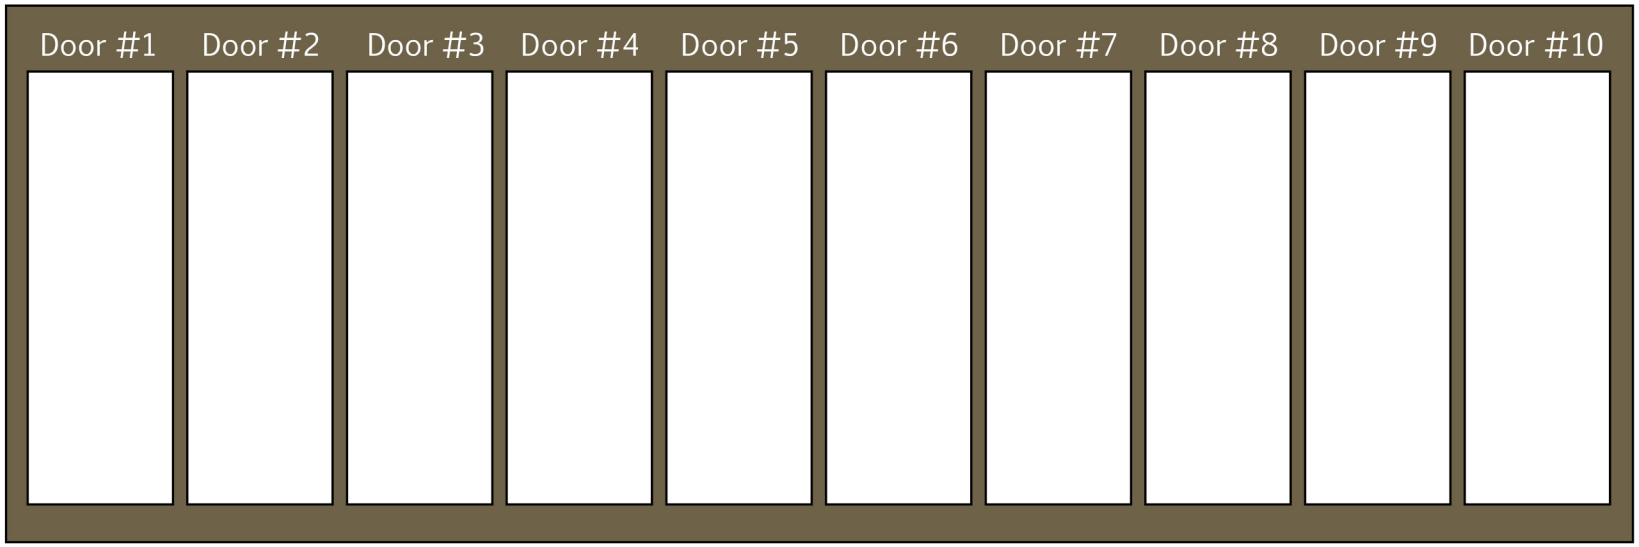
How to Measure - Merchandising

Gravity Flow Cooler Merchandising Info Sheet



1. Start with the first door of B-O-F Shelving.
2. Draw horizontal lines to indicate number of shelves per door, and vertical lines to indicate door set breaks. (Double mullions)

Double stacking is not recommended. Add another shelf instead.

3. Indicate product to be merchandised on each shelf. Choose from the guide; write in any unusual size or product.
4. If more than 10 doors, add another page.

1. Start with the first door of B-O-F Shelving.
2. Draw horizontal lines to indicate number of shelves per door, and vertical lines to indicate door set breaks. (Double mullions)

Double stacking is not recommended. Add another shelf instead.

3. Indicate product to be merchandised on each shelf. Choose from the guide; write in any unusual size or product.
4. If more than 10 doors, add another page.

How to Measure

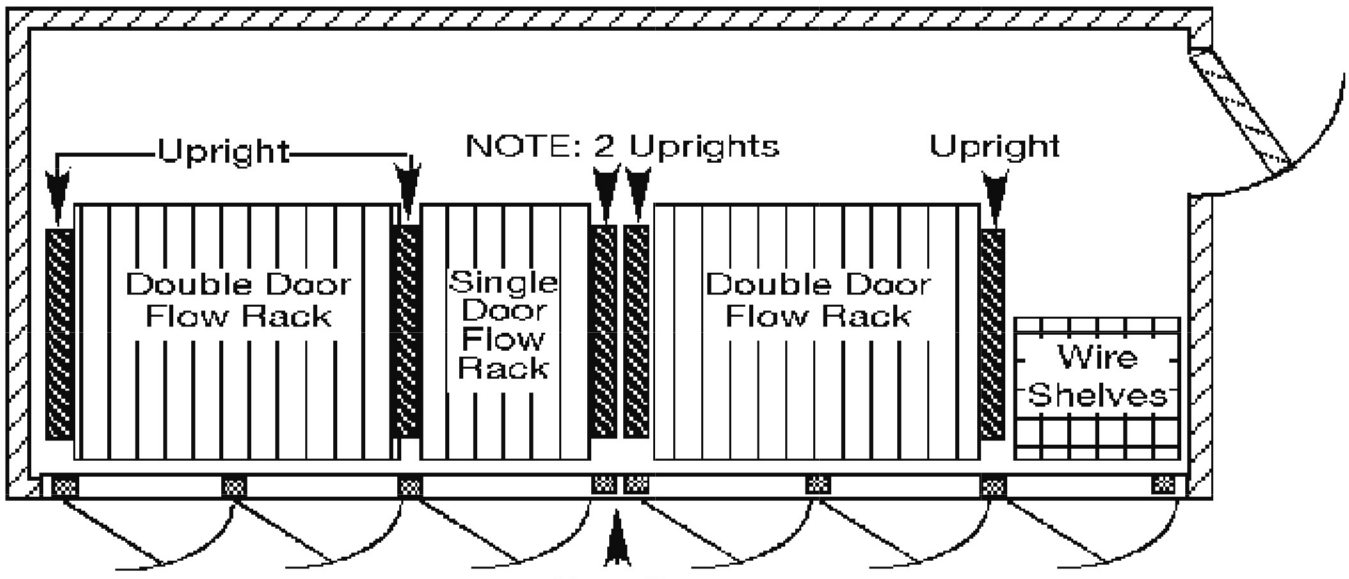
Determining Shelf Depth to order

If inside cooler depth is	
6’ to 7’	order 3’ deep racks
8’ to 9’	order 4’ deep racks
10’ to 11’	order 5’ deep racks
12’ to 13’	order 6’ deep racks
14’ to 15’	order 7’ deep racks
16’ and deeper	order 8’, 9’, or 10’ deep racks

Double Door Mullion

Where door sets (frames) join, two upright supports must be used side-by-side in order to span the wide area created at the joint, and keep the racks centered behind the doors..

Example: 5 of 6 doors on a frame of two 3-door sets



* A double mullion may also be referred to as a “flange”.

NOTE: If B-O-F shelving is to be installed next to existing store shelving, use a 1-1/2” upright to make sure shelving aligns behind doors.

Warranty

Limited Warranty

Effective August 1, 1994, B-O-F Corporation warrants all gravity feed shelving standard products that it produces and ships against defects in materials and workmanship for 36 months from date of shipment. Please note-Custom Painting is specifically excluded from this warranty. For warranty information on this item, please contact the factory at time of order. Please note that freight damage does not constitute a defect in material or workmanship.

This warranty extends only to the original purchaser of new products purchased directly from B-O-F Corp., its authorized dealers or distributors, and does not apply to any product which is: (A) repaired or altered without B-O-F Corp.'s knowledge and consent; (B) operated or installed contrary to B-O-F Corp. instructions; (C) misused, improperly maintained or damaged through accident or negligence; (D) improperly lubricated with any lubricating substance other than a silicone spray that is approved by B-O-F Corp.; or (E) not paid for in full.

THIS WARRANTY IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. THERE ARE NO WARRANTIES OTHER THAN THAT DESCRIBED HEREIN AND NO REPRESENTATIVE OF B-O-F CORPORATION HAS THE AUTHORITY TO ENLARGE OR ALTER THIS WARRANTY.

B-O-F Corporation's only liability shall be to repair or replace (at the option of B-O-F Corporation) non-conforming goods or parts, shipped F.O.B. from B-O-F Corporation's plant. (Warranty on replacement runs for the unexpired time of the original warranty.) B-O-F Corporation shall not be liable for any special, direct, indirect, incidental or consequential damages.

For warranty claims contact B-O-F Corporation's Product Service Department. Written authority either to return the defective product or to field scrap it will be issued at that time. A new or repaired product will then be invoiced and shipped F.O.B. from B-O-F Corporation's plant as soon as possible. Once the defective part has been returned, the warranty status will be verified and appropriate credit issued.
